

Snail Growth Rate Analysis

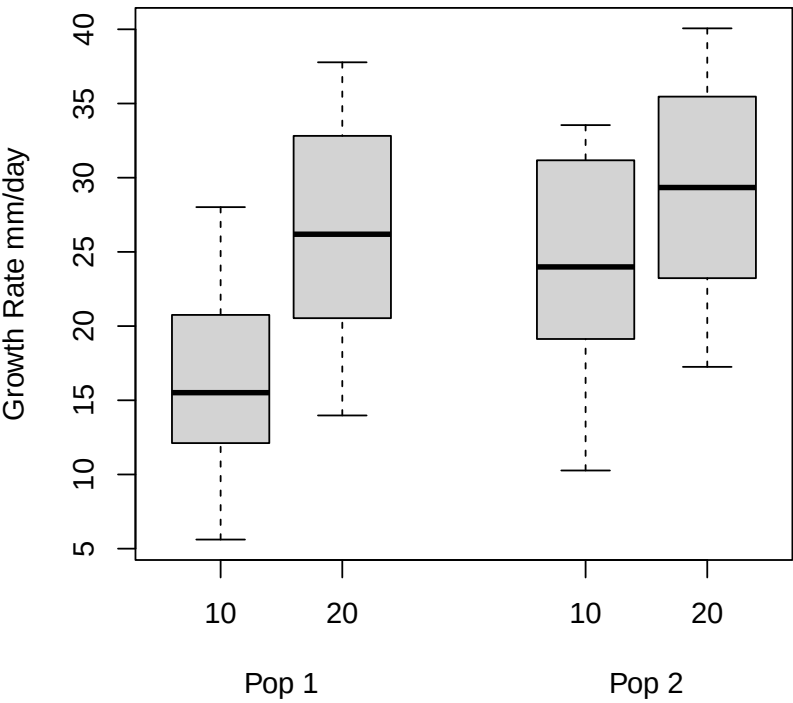

2026-09-12

Introduction

This report shows the effect of temperature and population of origin on the growth rate of snails

Results of Experiment

Below is the boxplot showing growth rates across temperature treatments of 10°C and 20°C and populations:

Statistical Analysis

We did a two way ANOVA which evaluated temperature, population, and the interaction between the two:

##	Df	Sum Sq	Mean Sq	F value	Pr(>F)
----	----	--------	---------	---------	--------

```
## df.t$temp          1  292.8  292.83   3.501 0.0798 .
## df.t$pop           1  125.7  125.75   1.503 0.2379
## df.t$temp:df.t$pop  1   24.3   24.29   0.290 0.5974
## Residuals          16 1338.5   83.65
## ---
## Signif. codes:  0 '***' 0.001 '**' 0.01 '*' 0.05 '.' 0.1 ' ' 1
```

Conclusion

Temperature and population both did not show statistically significant effect on snail growth rate. There was no significant effect between temperature and population.
